DIGITAL TWINS FOR INTELLIGENT 3D DATA VISUALIZATION

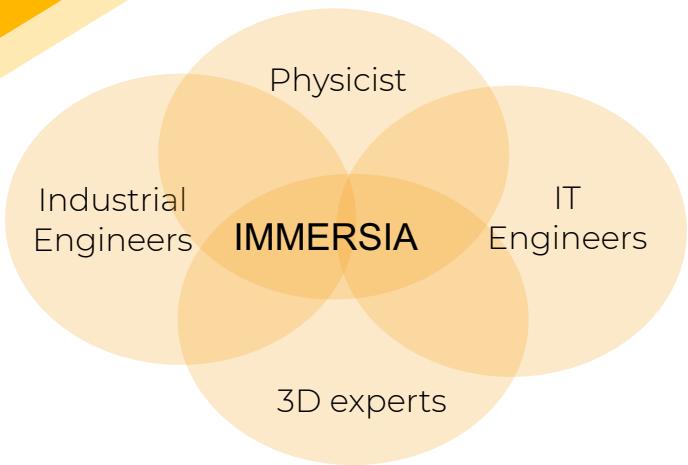

www.immersia.eu

ABOUT US

We are a technology company that develops **advanced solutions for visualization and data analytics**.

We **optimize the value of data** through the latest technologies, such as **Big Data and interactive 3D environments**.

We collaborate with our clients with the aim of helping them **turn their companies into high-performance businesses**.

WHAT WE DO

DASHBOARDS

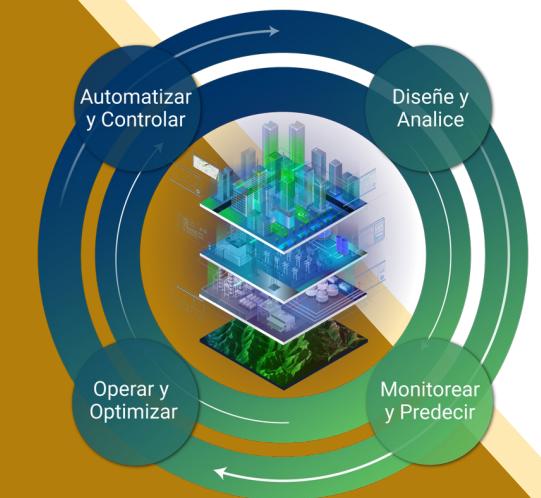

Last generation dashboards to analyze business key data in real time

VISUAL ANALYTICS

We discover and interpret meaningful patterns that help to make best decisions

DIGITAL TWIN

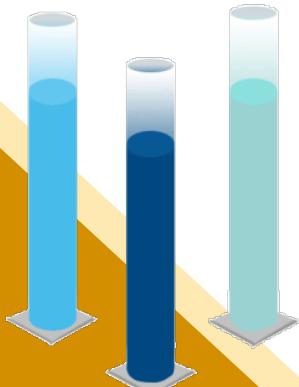

Interactive digital representation of a process, product or service that help optimize performance.

DASHBOARDS

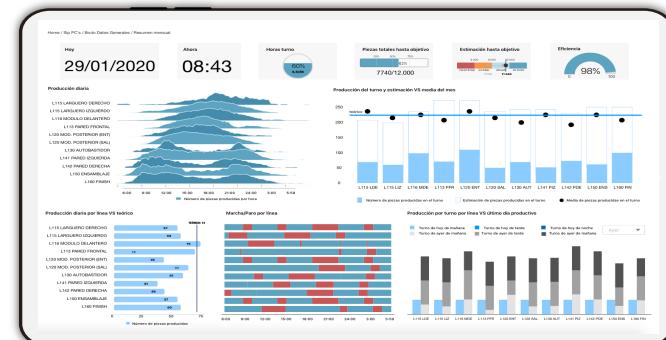

Dashboards offer an **intuitive display** of business indicators for users responsible for monitoring, controlling and managing business processes.

Inteligencia visual

Analítica avanzada

Visualización 3D

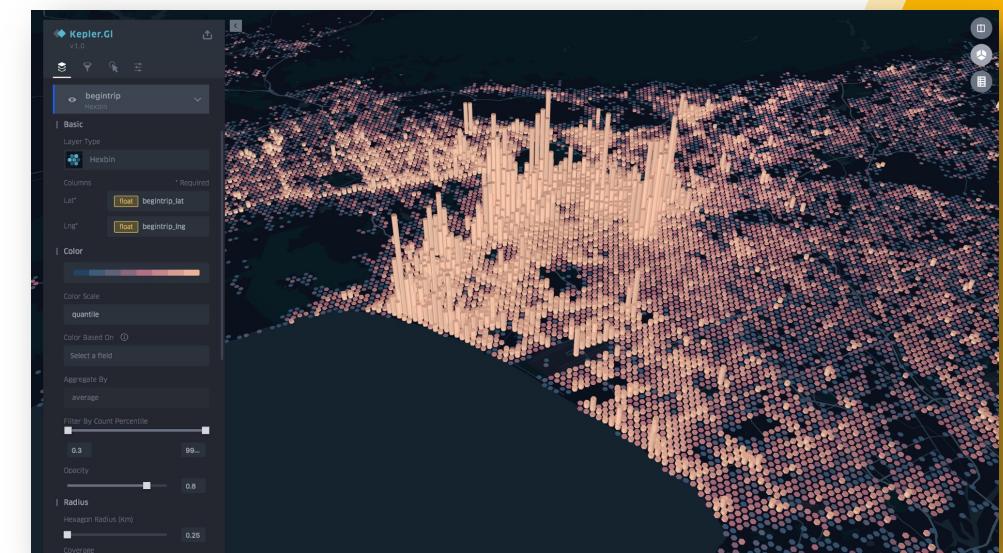

Adaptable to multiple environments through **visual intelligence**, making the data express itself through animations, color codes and audiovisual effects.

VISUAL ANALYTICS

Science of analytical reasoning through the use of **interactive visual interfaces**.

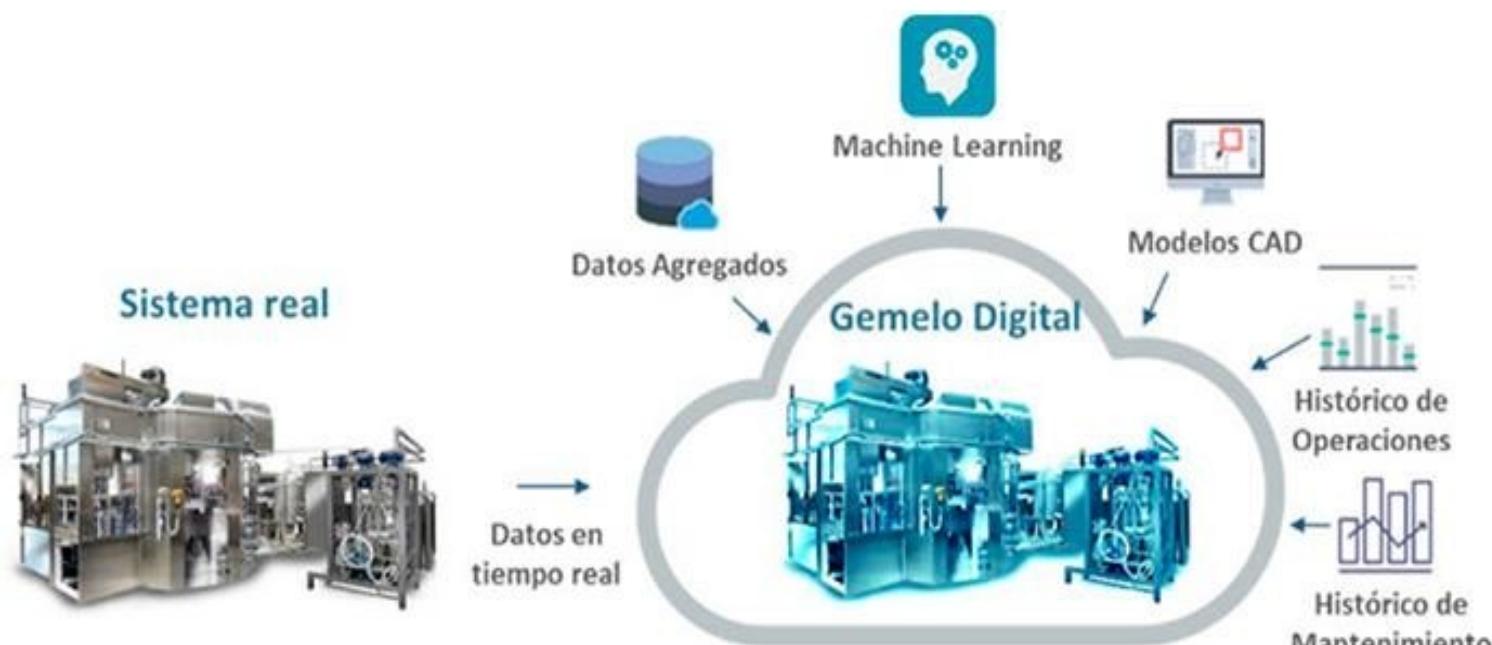

Visual Analytics aims to represent large volumes of information that allow the user to efficiently extract and analyze **relevant information for decision making**.

DIGITAL TWIN

Virtual representation of a machine or a manufacturing process, which is connected to a machine or process through data captured in real time, and helps **optimize business performance**.

The technology behind digital twins seeks to have a digital "copy" of a physical element, in order to **monitor and analyze** its reaction to certain stimuli or circumstances, and serves as a bridge between the physical and digital worlds.

BENEFITS

1. Production optimization
2. Lower maintenance costs
3. Real time monitoring
4. Greater knowledge and improvement in decision making

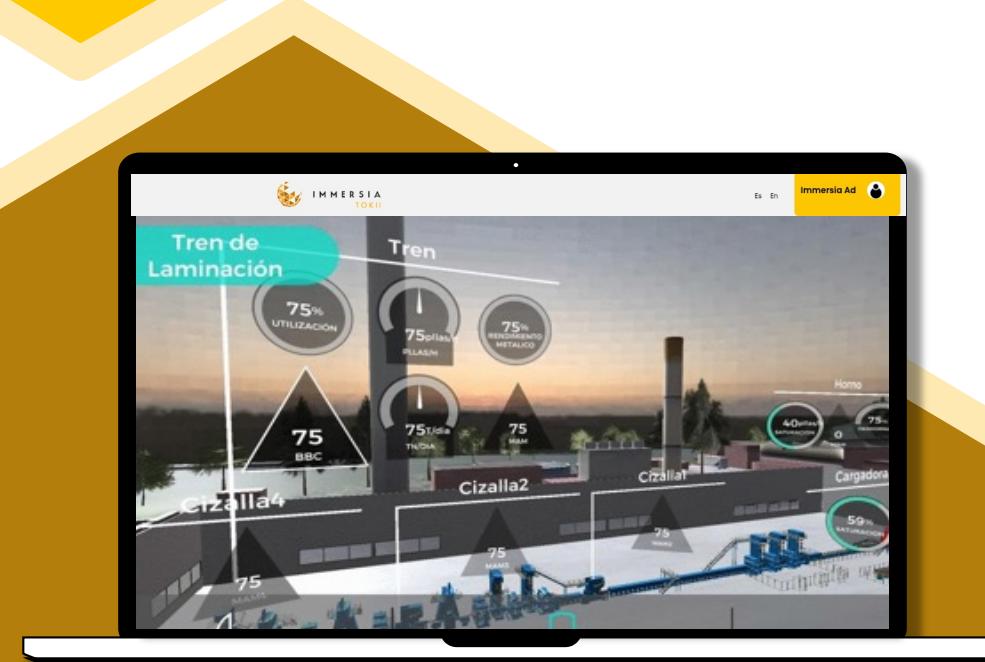

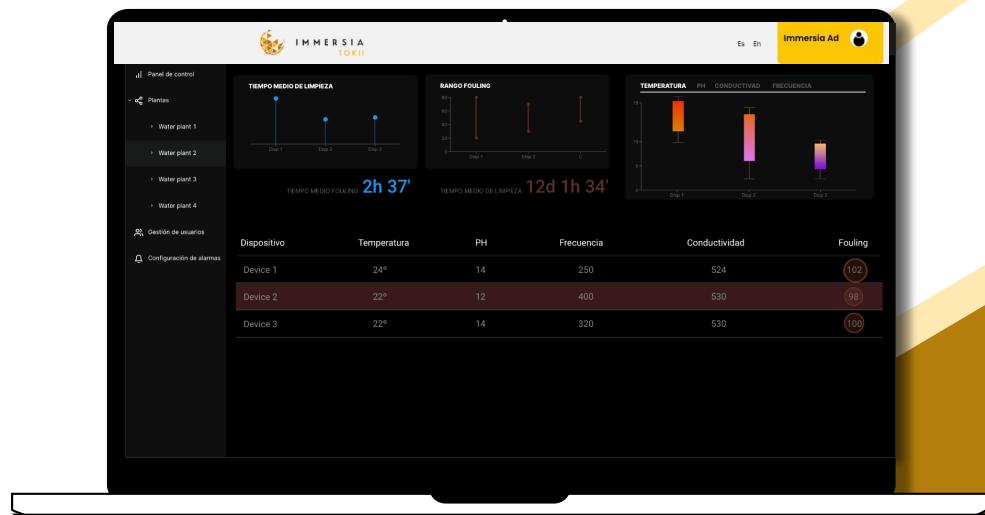

Backend

It offers a **complete administration panel** with management of users, groups, permissions, alarm configuration and document management of the facilities

Allows you to edit and create new information displays in the form of **labels or various graphs**

Podrás crear **flujos de navegación en multíniveles**, con visualizaciones intuitivas e interactivas

Its **3D Editor** allows you to design the environments, by creating virtual replicas from 3D models and data on labels and graphics

FEATURES

Multi-device platform

Apart from a tablet device, it can be connected to the app from a PC, a large screen or VR glasses

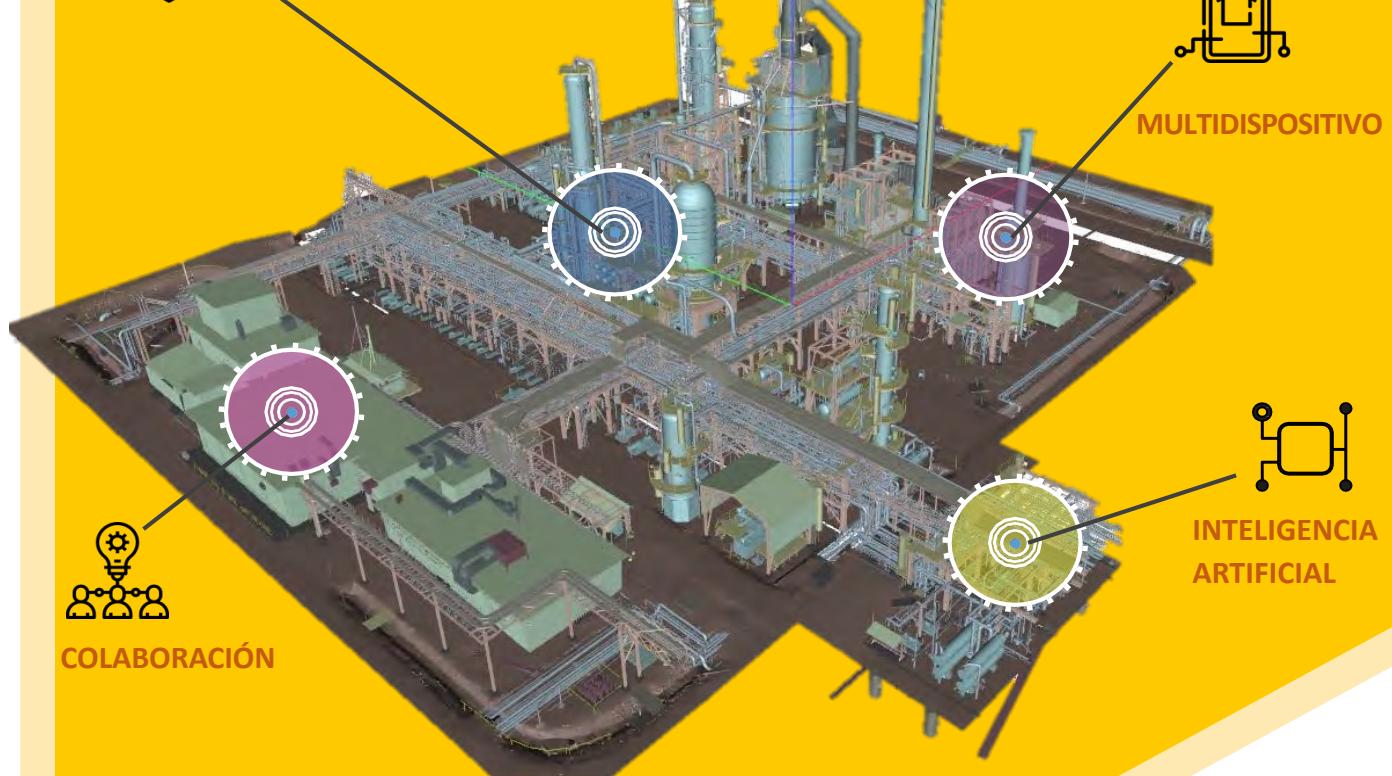

Collaborative Environment

Users can connect to the same environment from different devices to jointly view the status of the project.

Flex architecture

Connection with data sources that may affect the progress of the work, such as weather, state of machinery, state of the sea/waves, etc.

REPRESENTACIÓN 3D

BENEFITS

- **Agility in data interpretation** through intelligent models, animations, and intuitive interaction with assets.
- **Cost and time savings** for inspections by facilitating early identification of errors, disagreements and other issues in construction
- **Better informed and more effective decision making** thanks to the integration of different sources of information
- Better project **coordination** and progress **monitoring** in remote work.
- **Transparency** between the multiple work teams

PRIMETALS
TECHNOLOGIES

RELACIONES DE **ÉXITO**
Que nos hacen mejores

Challenge

Highly digitized factory need to efficiently interpret and use a large volume of data.

Solution

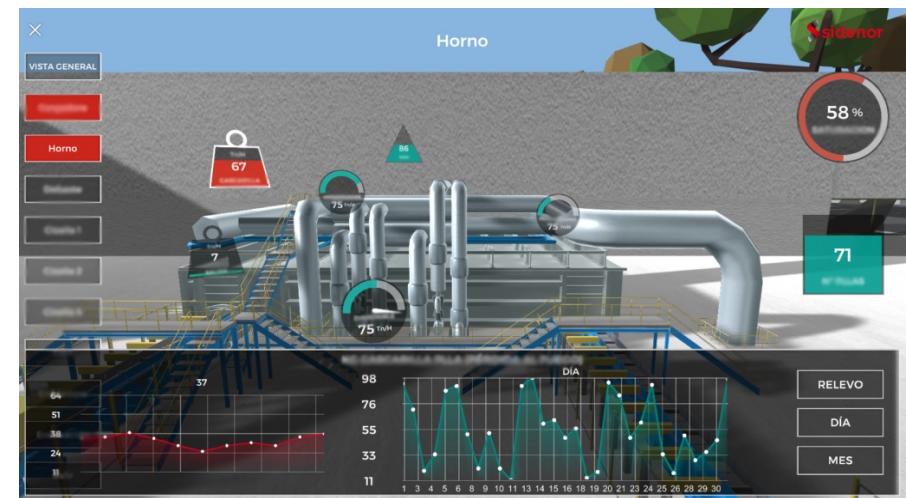

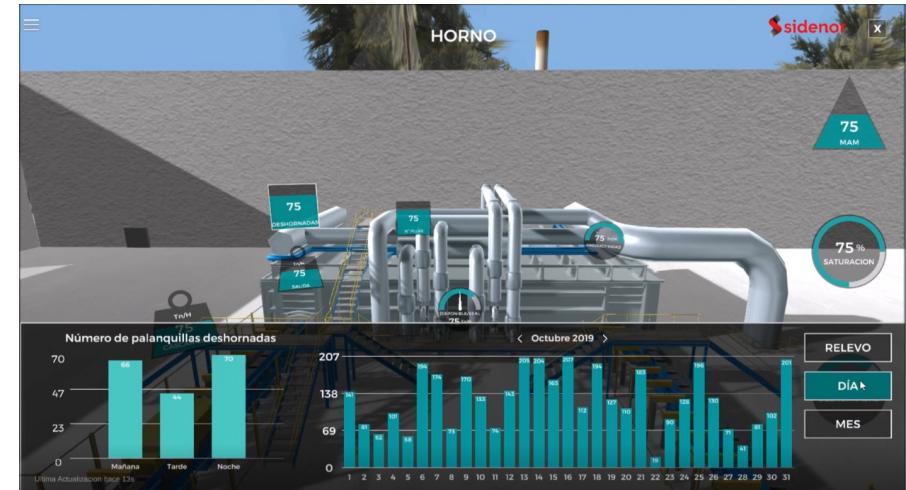

Development of a Digital Twin with real-time and historical KPI monitoring, with a visual intelligence layer.

Benefits

Plant managers informed at all times of the entire process operation, receiving notifications of incidents, even if they are not present.

sidenor

Challenge

Understand the conclusions their simulation system was reaching. It was difficult to interpret the results generated in the report due to the lack of a more explanatory viewer.

Solution

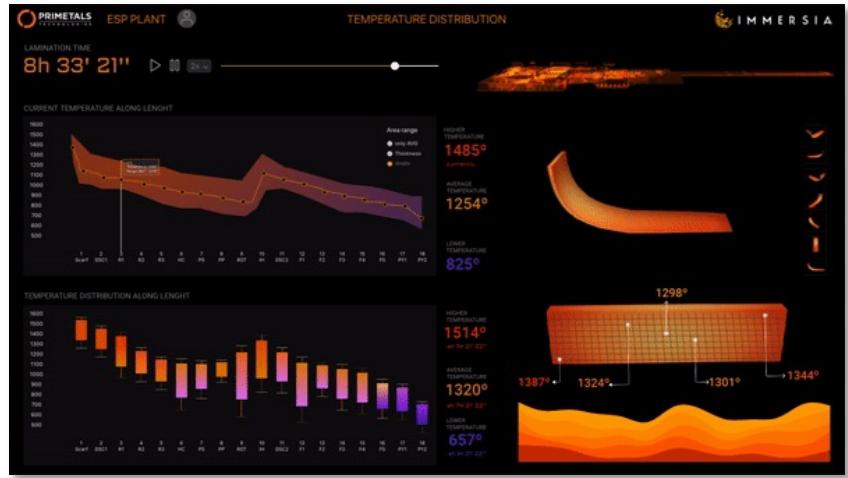

Exact replica of the industrial plant, including all the dynamics of its processes, providing it with a layer of visual intelligence of data in real time to its visualization platforms.

Benefits

The development of this visualization system has allowed them to achieve better user interaction and optimal understanding of the conclusions that come from the simulation engine.

Challenge

Monitor and manage broadcasts from more than 200 centers and react as soon as possible to incidents that may occur in real time.

Solution

Advanced control panel in 3D environment intuitively showing data generated by the broadcast towers of the entire Spanish geography.

Benefits

Estar conectados a su cuadro de mando de última generación y controlar la calidad de emisión de sus centros gracias al valor que aporta la inteligencia visual.

rtve

Challenge

Fabricantes de sensores IOT generan gran volumen de datos y necesitaban alojarlos todos en una plataforma, analizarlos y tener una capa de visualización intuitiva.

Solution

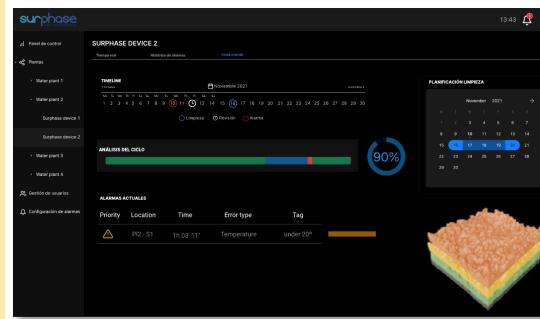

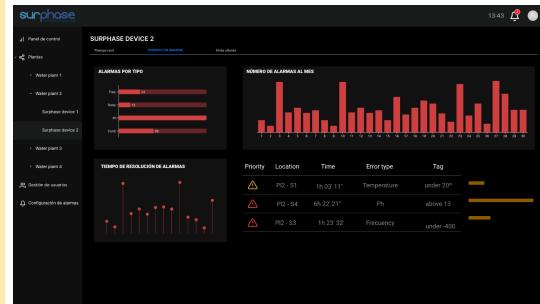

Plataforma para la optimización de plantas de producción de agua mediante algoritmos de machine learning con mantenimiento predictivo y cuadro de mandos con visualización avanzada

Benefits

Tener la capacidad de predecir incidencias de sus sensores (suciedad) y ofrecer a sus clientes un servicio más integral de sus dispositivos con una capa de visualización de última generación

surphase
Smart Water Engineering

Challenge

Disponer de una plataforma de visualización avanzada diseñada para la supervisión centralizada. Necesidad de una visión unificada e integrada de todos los procesos en tiempo real.

Solution

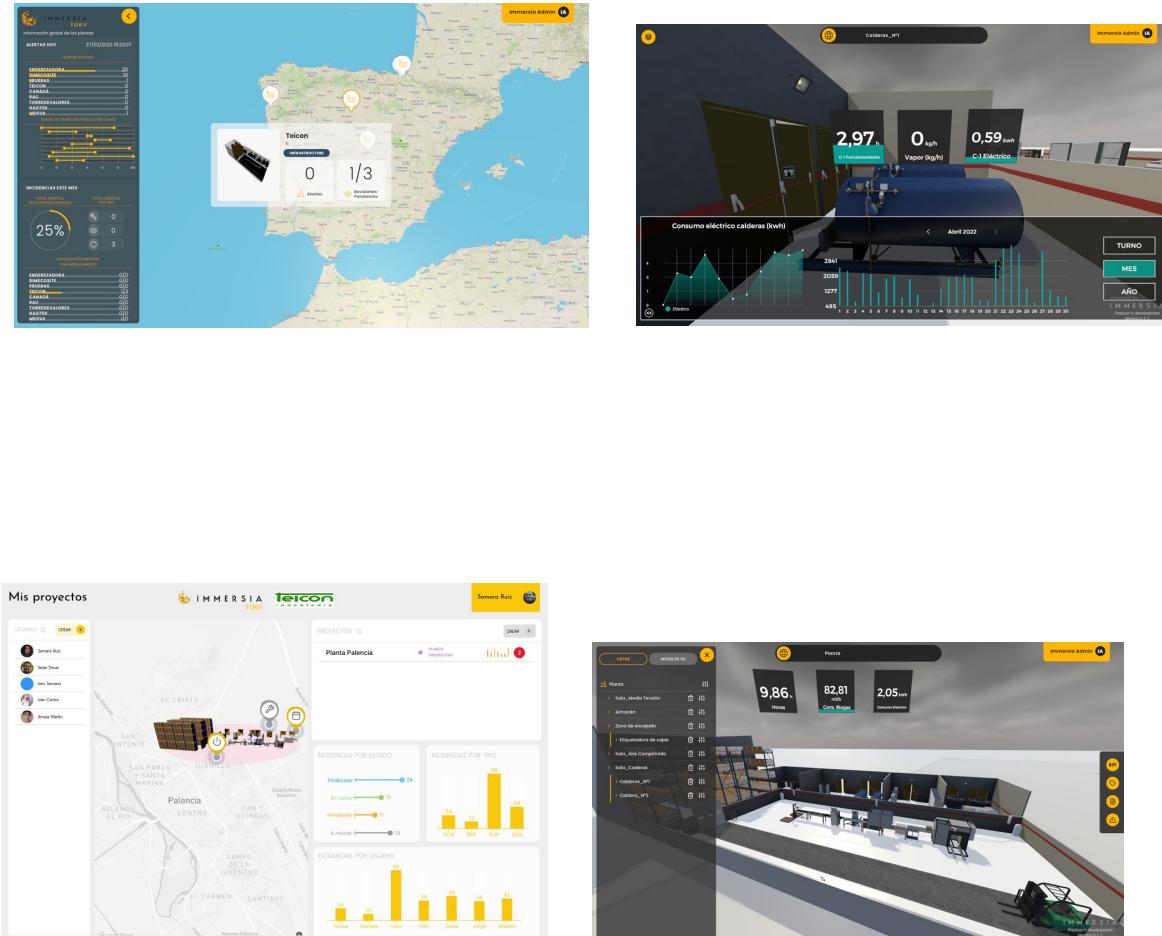

Modelo digital con acceso a un entorno interactivo de información estática de mantenimiento de las instalaciones de planta y conexión a los datos en tiempo real para su monitorización.

Benefits

- Supervisión centralizada
- Agilidad en la interpretación de datos
- Optimizar tiempo de respuesta ante incidencias
- Mejora en la toma de decisiones

teicon
INGENIERIA

Challenge

Representación Gráfica avanzada del HMI de sus líneas de fabricación completa

Solution

Visualización avanzada basada en gemelo digital, adaptada a las necesidades de Dimeco

Benefits

- Mejora de la productividad
- Ahorro en costes y tiempo
- Nueva línea de negocio
- Satisfacción del cliente

Challenge

Cálculo del bucle y la velocidad de producción de sus procesos de fabricación.

Solution

Escenarios de aplicación de gemelo digital e IA

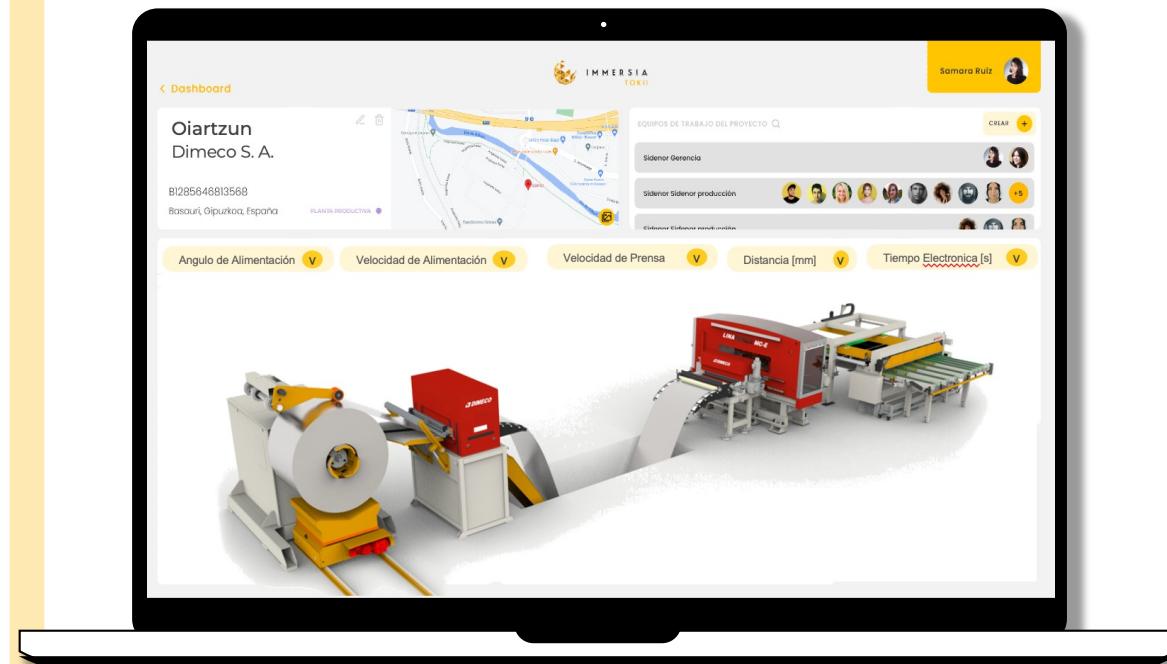

Benefits

- Mejora de la productividad
- Ahorro en costes y tiempo
- Nueva línea de negocio
- Satisfacción del cliente
