Industrial monitoring
and control solutions

the GOAL

WE HAVE

HELP SMEs IN THEIR DECISIONS

Digital transformation is a set of **tools and skills**.

It helps industrial SMEs **tackle complex problems**.

Yet, **human beings are central** to any process, innovation and decision.

WHAT

WE DO

FROM SENSORS TO DECISIONS

We start from key data about processes and consumption to provide a clear picture that **helps people in companies take informed decisions** to improve efficiency and competitiveness.

HOW

WE DO IT

SOLUTIONS, SUPPORT, SPECIALIZATION

We **focus on the problem** to be solved, not on technology.

We **stand by our customers** and help them understand impact, return, and funding.

We **work with specialized teams** to get optimal results.

WHO

WE ARE

A NETWORK OF SMEs CREATING SHARED VALUE

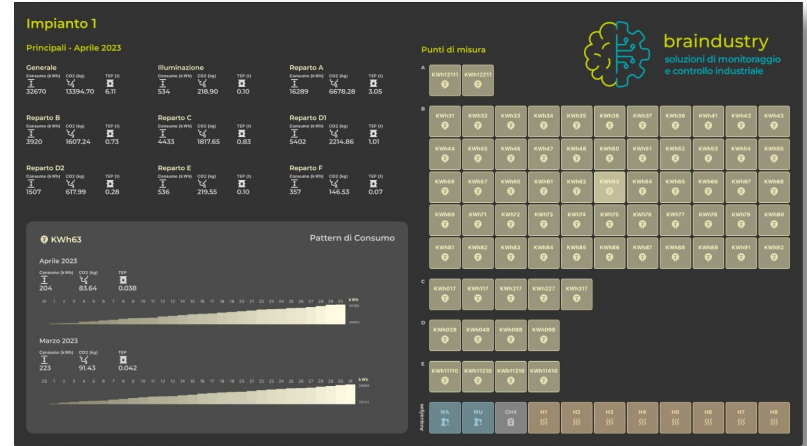

We've been working together for quite some time, combining top-notch knowledge about **Industrial IoT, Human/Machine Interfaces, Service and Brand Design, Energy Analysis, Environmental, Social and Governance.**

EXAMPLE

STORIES

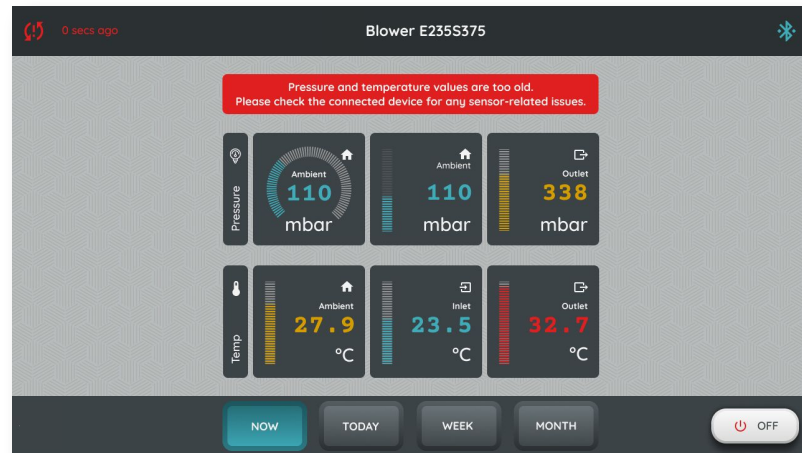

Energy, water and heating consumption and emissions analysis

IoT sensorization and a fully custom dashboard quickly pinpointed consumption inefficiencies and CO2 emissions for a large facility to estimate carbon footprint.

Enhanced process monitoring and control

For better monitoring and control, a side-channel blower was augmented with a touch interface (onboard and remote) and fully offline voice input.

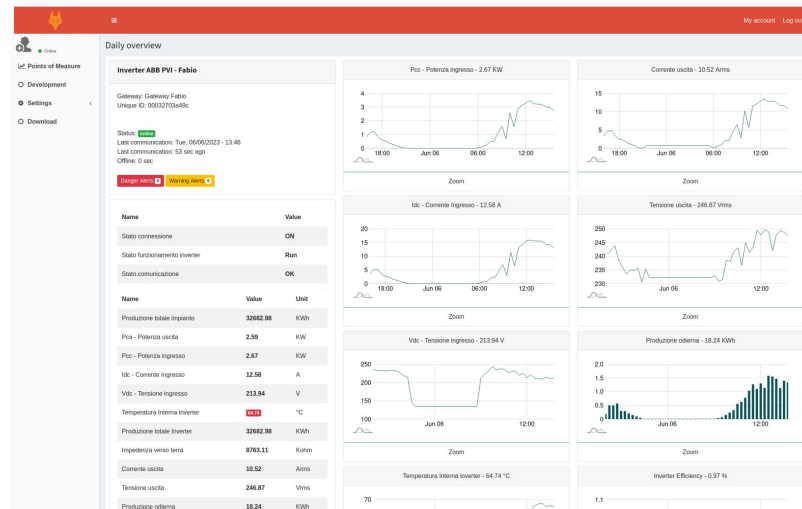

Monitoring for air pollution abatement

Within a EU-funded project, we provided an industrial IoT solution for air quality monitoring of an innovative pollution abatement system.

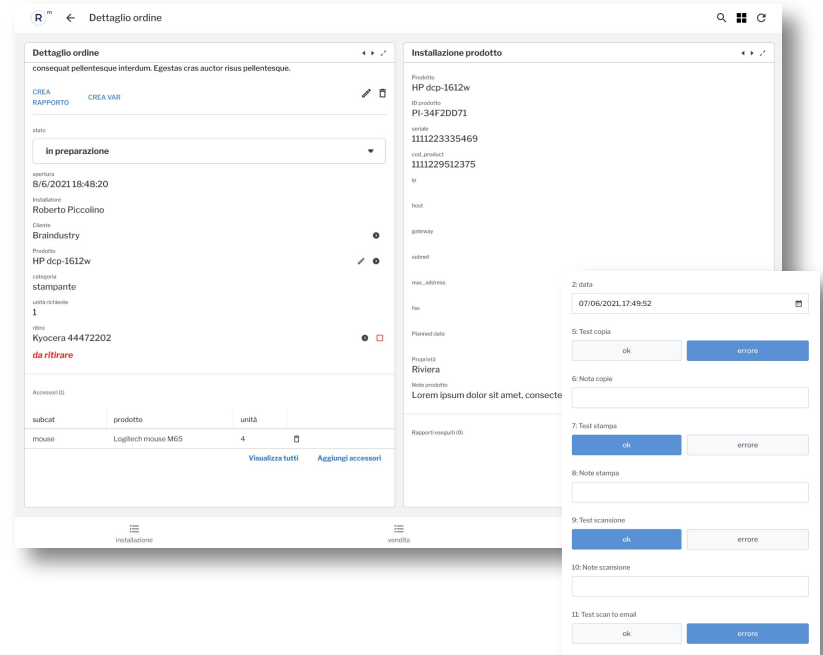

Real-time renewable energy monitoring

A fully customizable platform based on open source components and protocols provides real time data about solar farms and smaller plants.

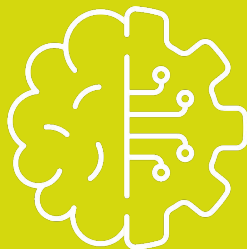

Easy inventory management

A no-code, white label solution enables mobile digital inventory management for more efficient operations and reduced costs.

**we make
digital transformation
more human**
