# Flexible as your idea needs

Company services

# About **us.**

---

We are Algorath, an **IT consultancy** company based in Málaga, Spain, with a prime focus on the field of **Business Intelligence** and **Software development** using cutting-edge technologies.

Our expertise in **international projects** allows us to adapt our know-how to your projects, fitting your requirements.

You decide the level of interaction from your side: from bringing to us an **idea** and seeing it **make real** in a few months, or incorporating an entire team into your department to **collaborate together** in the development. It is up to you.

Confidential information

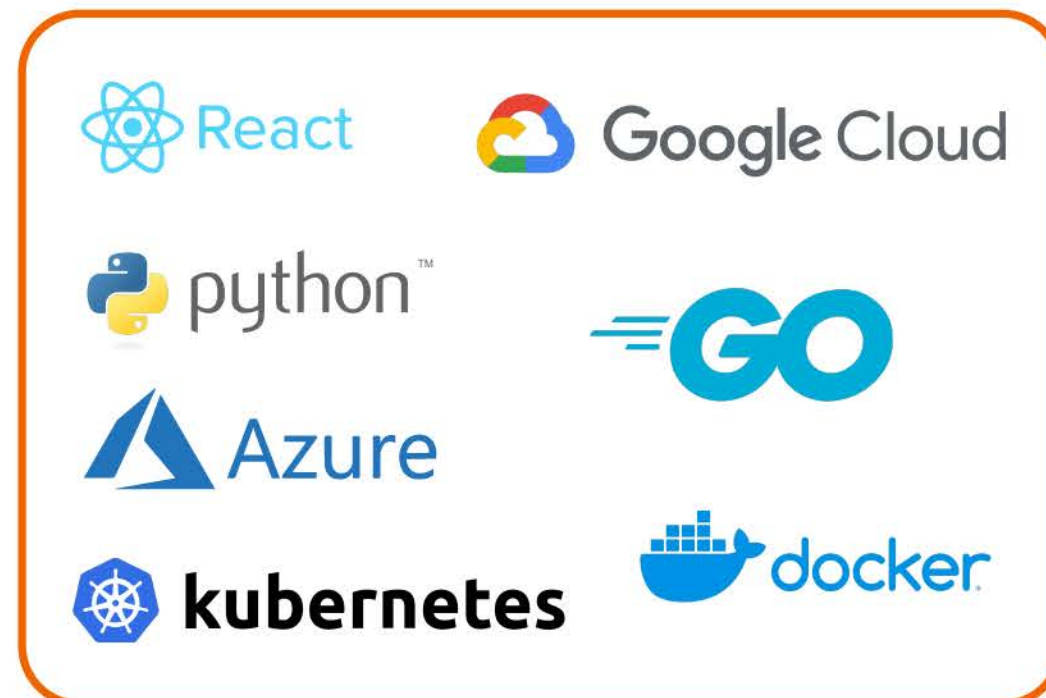

# Our services.

Algorath is mainly focused on the following business branches using different programming languages and tools:

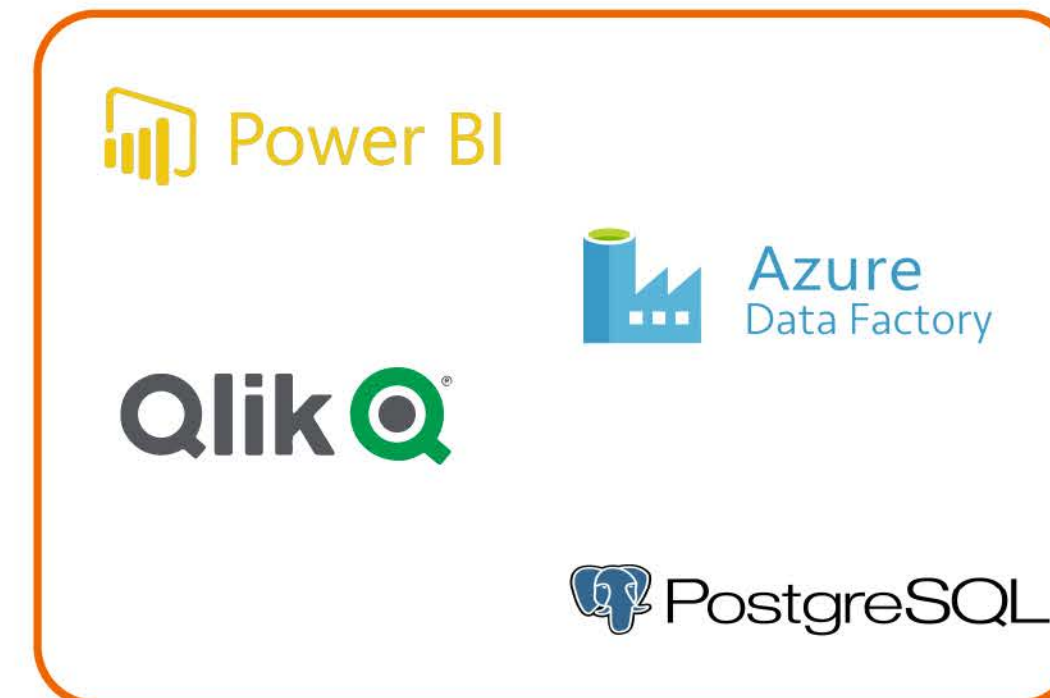

## Software development

- Software development outsourcing
- Custom software development

## Business intelligence and analytics

- Extract, Transform and Load (ETL) process
- Data reporting and visualisation

Intelligence

# Business Intelligence (BI).

Data transformation is critical for companies as it provides valuable insights into their operations, customers and competitors. Companies can make informed decisions, identify opportunities for **growth** and **optimise performance**. In today's data-driven world, Business Intelligence is essential for staying **competitive** and **achieving success**.

- **6%** increase of profitability for companies using **BI**
- Companies that work with BI are **5** times more likely to make faster and more accurate decisions

Confidential information

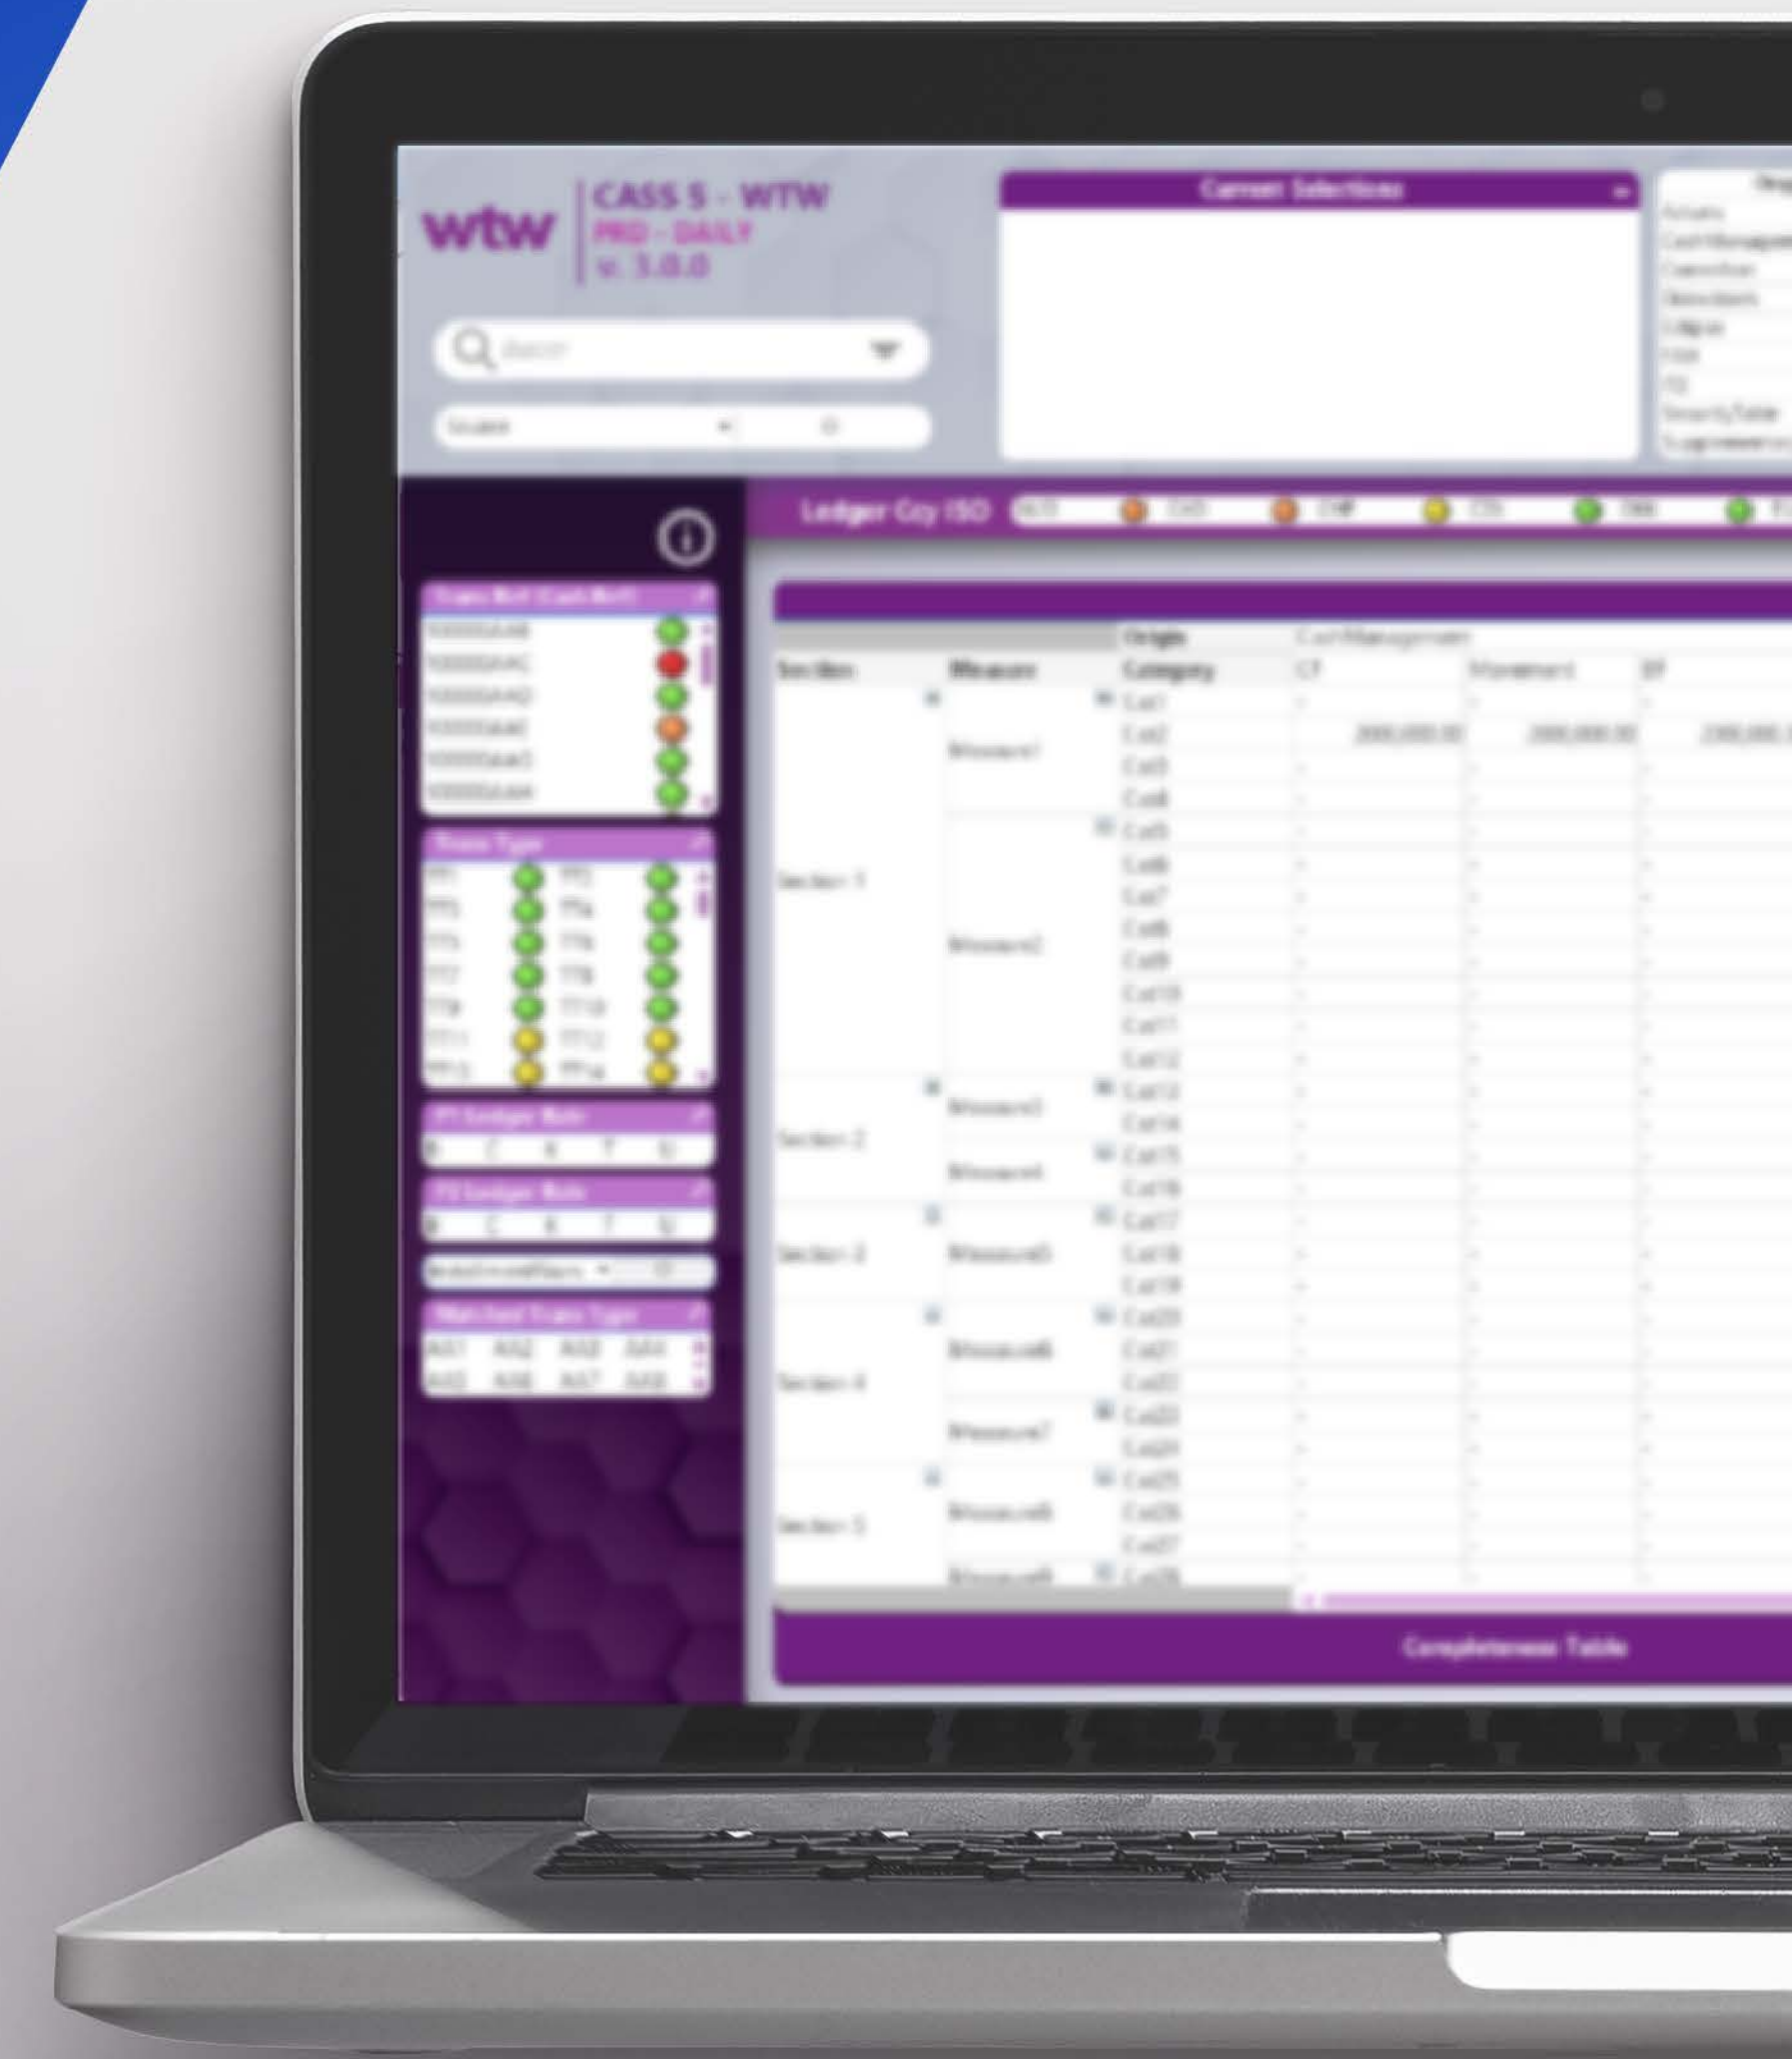

# Willis Towers Watson.

## Willis Towers Watson.

A data reconciliation tool has been developed for WTW, **extracting financial data** from different databases and making **transformations** to facilitate the **validation** of data and the accomplishment of FCA legislation.

Confidential information

# IMSERSO.

Algorath has developed a solution for the Social Security and Older Citizens Institute (IMSERSO) in Spain, which improves the **management of the workforce** in the facilities managed by IMSERSO.

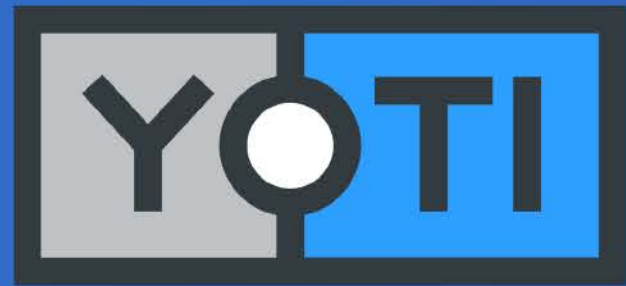

The solution uses different **data tools** and a **web application** for the interaction of the employees with the solution, **digitalising** the process and **reducing** possible **error and data loss**.

Confidential information

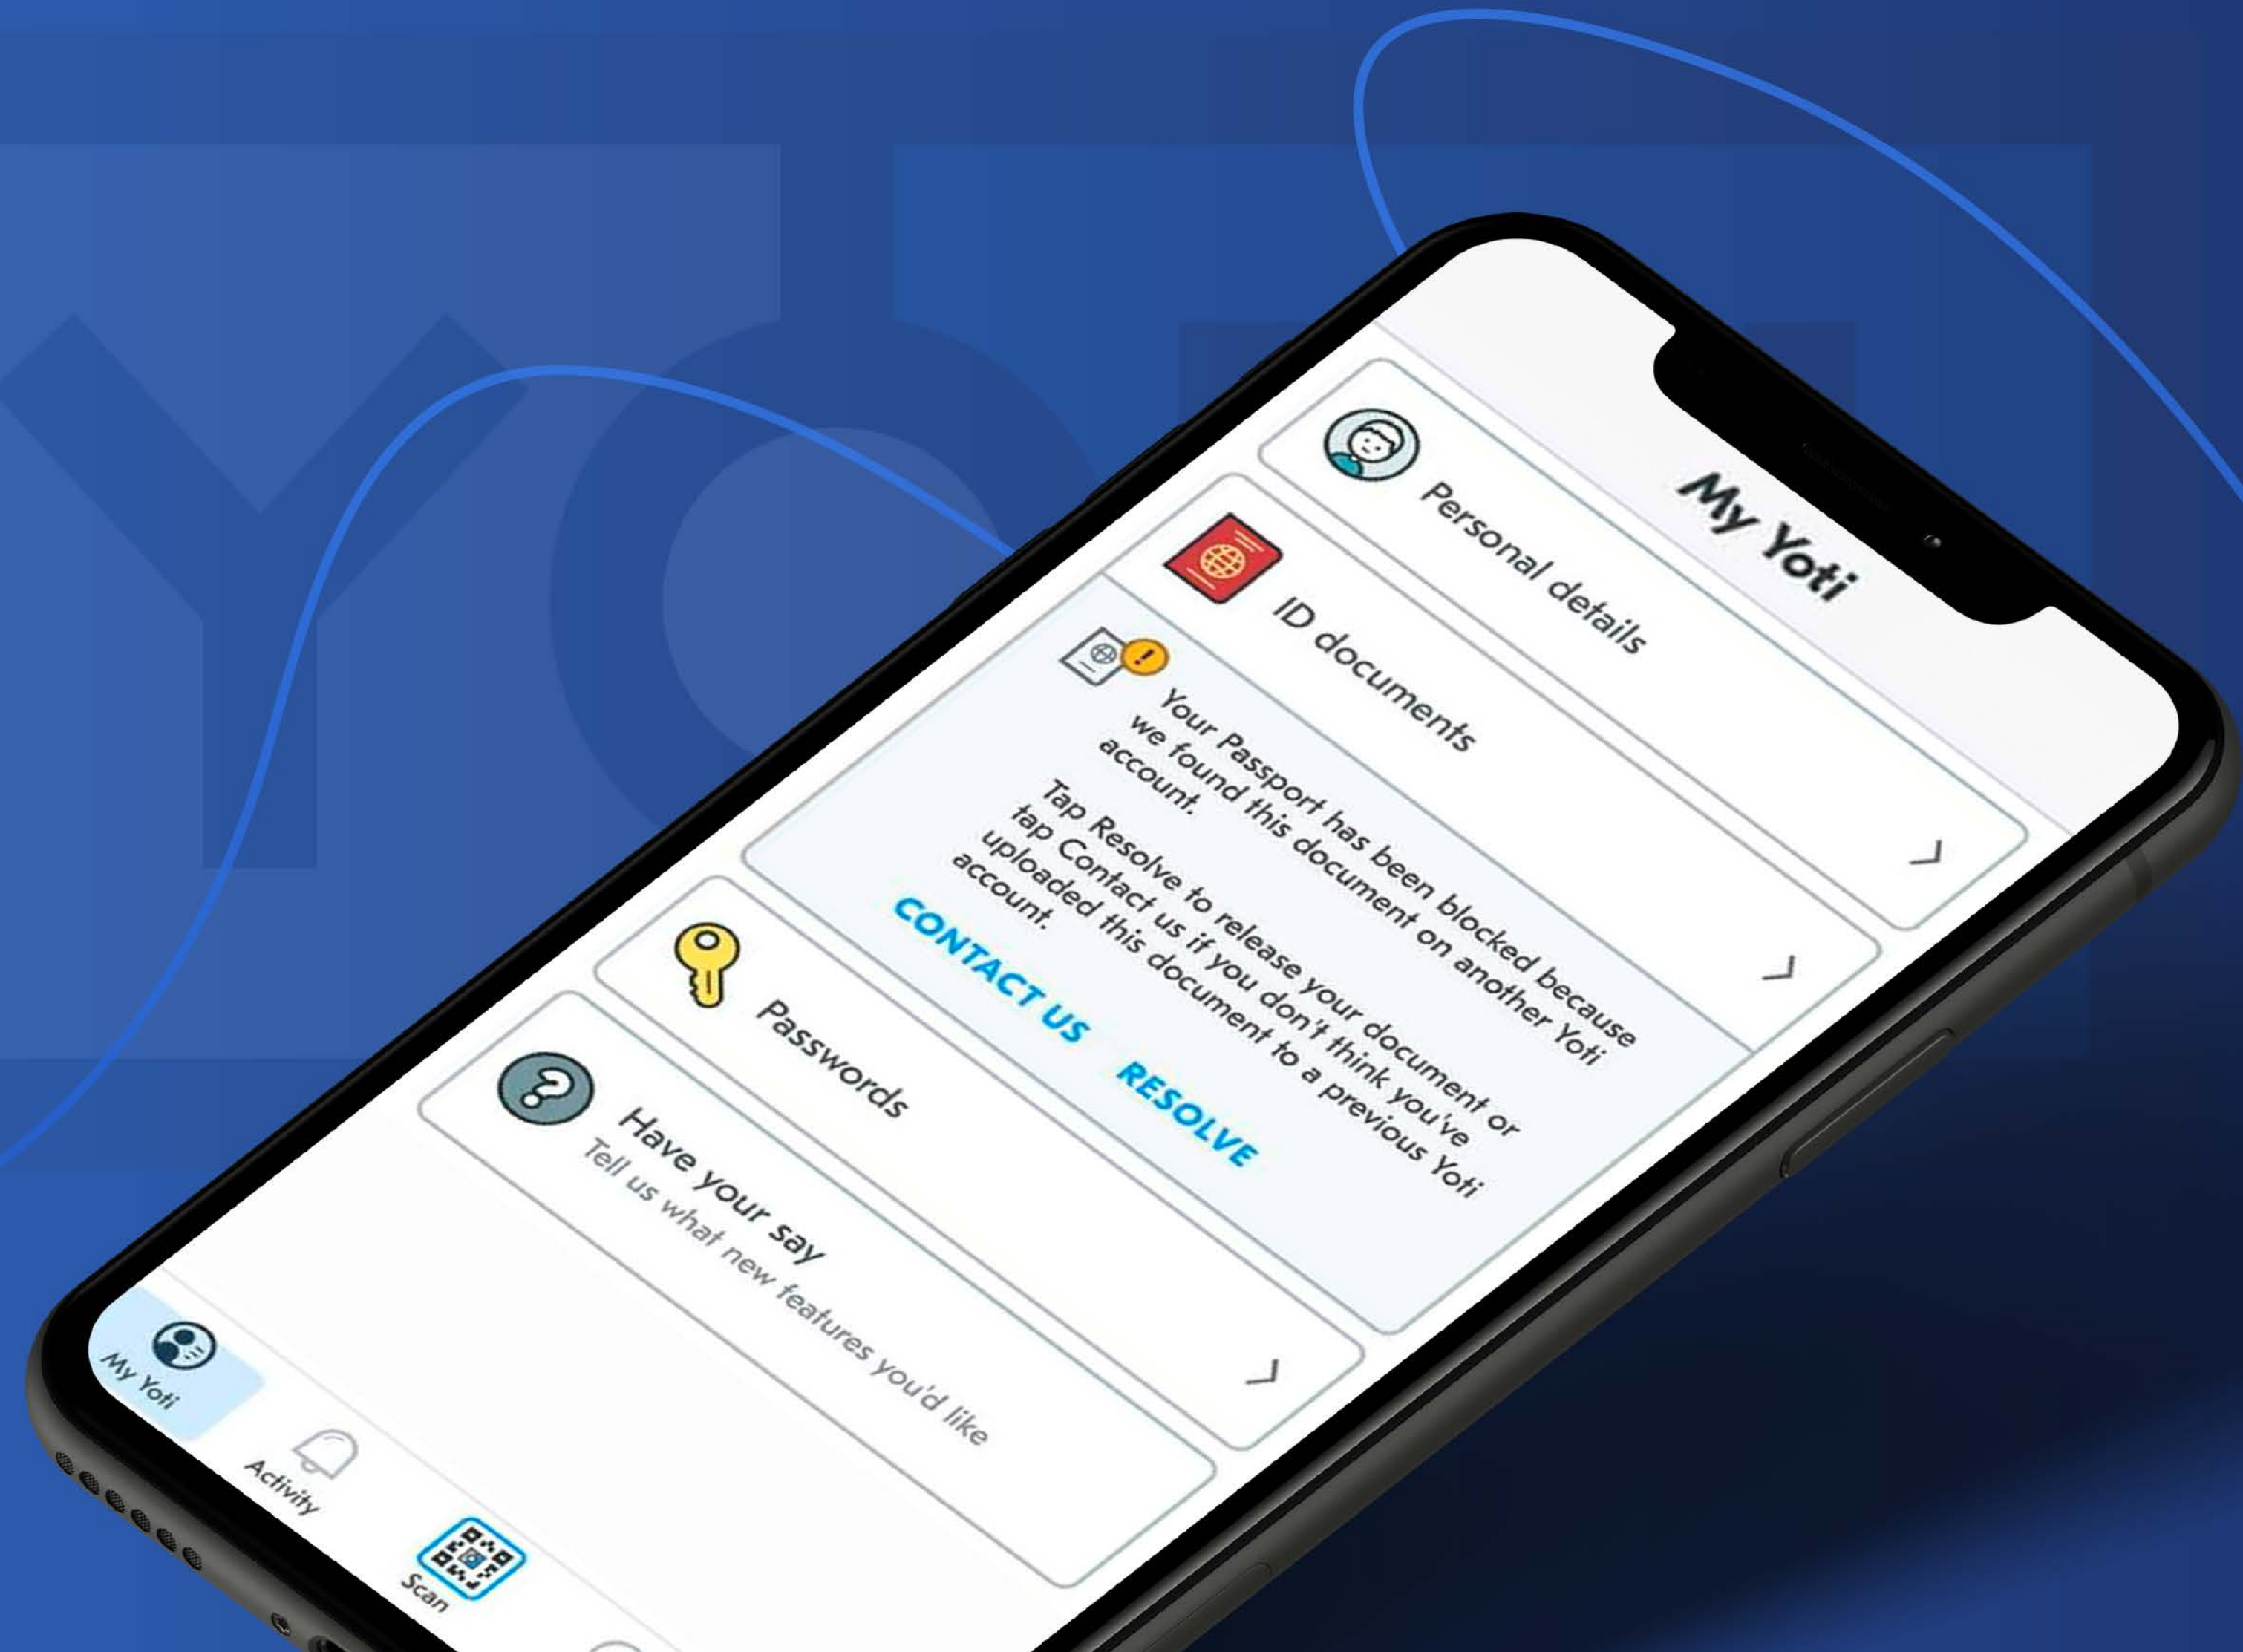

## We develop together with **Yoti** solutions related to digital ID.

The relationship between Algorath and Yoti started in **2017**, and since then we have been working together on **microservices** with **cutting-edge** technologies for Yoti's product catalogue, based on digital identity.

Our last project? A **web service** which uses an **Artificial Intelligence algorithm** to identify faces and Age verification.
