

EWaLa

security wizards

Innovation and Cibersecurity
to protect your company

WHO ~~ARE WE?~~

Ewala is an innovative technology-based company founded in 2021 to provide **cybersecurity, privacy and data protection** services to the productive sector.

- We are specialized in Industrial Cybersecurity and IT Cybersecurity.
- We develop our own tools thanks to the incorporation of a R+D+i department.
- We offer 100% personalized cybersecurity services, providing the best tailored solution for each case.
- From our financial department, we advise clients on project financing.

OUR *TEAM*

Our team involves professionals with extensive experience:

- Computer engineers
- Criminologists
- Graduates in naval machines
- Engineers in geomatics and topography
- PhD Chemists
- Graduates in economics

This convergence of profiles leads us to discussions, confront our positions and share different points of view, and all of this translates into a professional service that has a global company vision, obtained from very different angles

OWN ~~THREAT INTELLIGENCE~~ APPLICATIONS

karont3

SaaS application that continuously monitors the Internet (Dark Web, Social Networks...) in search of information about your company that has been leaked from your company through illicit or accidental means and is available to third parties who should not have access to such information.

Karont3 protects you beyond your control perimeter, allowing you to detect leaked information before it is used for criminal purposes, allowing you to monitor entities such as emails, bank accounts, bitcoin accounts...

orf30

Web application that allows you to centrally search for indicators of compromise (IOCs), thus facilitating investigation within security teams (Blue Teams, SOCs, Incident Response Teams)

Ewala is a provider of managed cybersecurity services that also develops its own applications through its R+D+I department, always in the field of information security, with the aim of improving the **security of your company**.

EUROPEAN PROJECTS

The Mineskeeper project arises from the Mine the Gap funding call, a solution developed in collaboration with Tecmina Minera Aplicada and HIotee.

MinesKeeper is a solution capable of centrally and continuously monitoring various health safety indicators of workers in mines and quarries.

Ewala has been recently awarded with the Neotec Program, a highly competitive financing initiative with institutional recognition aimed at supporting the creation and launch of new technology-based business projects. Currently we are developing an application designed to protect vulnerable industrial devices that cannot be replaced or updated.

This application is focused on learning the typical behavior of **Legacy OT devices**, allowing it to detect abnormal activities in a timely manner and prevent them from causing disruptions in industrial processes.
