

THE VALUE OF THE IDEAS

Álvaro Flores R&D Director alvaro.flores@rovimatica.eu Mobile phone: +34 601 533 437

http://www.rovimatica.com

ROVIMATICA AS A COMPANY:

- A technological SME. Capabilities:
 - Robotics (standard, collaborative, mobile, sensitive)
 - Process/Machinery automation. Mechatronic
 - Computer vision(2D, 3D, hyperspectral, thermal, artificial intelligence)
 - Automation and robotization in customised vehicles
 - R&D&I Projects
- Location:

INDUSTRIAL ROBOTICS:

- Design and implementation of robotics systems (manufacturing and assembling lines or isolated cells)
- Collaborative, mobile and sensitive robots solutions

IR

UNIVERSAL ROBOTS

robotics

Robotic repair and maintenance services.

KUKA FANUC

CUSTOMISED INDUSTRIAL SOLUTIONS:

- Design, development, manufacturing and commissioning (turnkey projects)
- Revamping of manufacturing lines and machinery
- Repair of industrial machinery
- Design and manufacturing of robotic accessories

INDUSTRIAL VEHICLE AUTOMATION:

- Pumping pressure and valve PWN control
- Communication to vehicle central control, POCLAIN, radio frequency control of cranes by Bus CanOpen

COMPUTER VISION:

- ROVIMATICA computer vision department has a large experience (+15 years) developing customised solutions based on computer vision systems.
- Artificial Intelligence based image processing (+5 year experience in solutions for final clients).
- Embarked Edge Computing for Al.
- Technological SME.
- ROVIMATICA has more than 50 engineers and technicians.

COMPUTER VISION:

We use computer vision including **AI based image processing** for:

- Defect detection
- Assembly assistance
- Vision-guided robotics
- Precision farming (drones and satellites)
- Drone detection
- Driver monitoring system
- People and obstacles detection
- Status monitoring of PV modules
- Water characterisation
- Vehicles and trucks
- Water leakage detection

COMPUTER VISION:

Image processing including AI based image processing:

- 2D images
- 3D images
- IR images
- Thermal images
- Multispectral images
- Hyperspectral images

COMPUTER VISION. USE CASE PRECISSION FARMING

Use case based in AI: Precision farming (Drones and Satellite)

- NDVI Index Calculation
- Weeds and dead plants detection using Artificial Intelligence Water Stress Index CWSI

COMPUTER VISION. USE CASE DRIVER MONITORING

Use case Driver Monitoring System based in AI:

- Face tracking and landmark detection
 Driver drowsiness and distraction detection
- Driver drowsiness and distraction detection using Artificial Intelligent (Tensorflow)
- Edge Computing

FACE AND LANDMARKS DETECTION

COMPUTER VISION. USE CASE DRIVER MONITORING

COMPUTER VISION. USE CASE DRON DETECTION AND TRACKING

Use case Drone detection based in AI:

Drone detection and tracking

Use case Automated detection based in AI:

Detection of PV panels and their defects

COMPUTER VISION. USE CASE COCKPIT

Use case Cockpit:

Cockpit testing by cobots and AI:

COMPUTER VISION. USE CASE QUALITY CONTROL

Use case industrial quality control:

- Defects in metal parts
- Robot picking

COMPUTER VISION. USE CASE RAILWAY Use case railway infrastructure: Defect detection (cracks, missing bolts, rail wear, etc) ObjectModel3D ObjectModel3D Se de 41 24/01/2018 02 WE

COMPUTER VISION. HIGH VOLTAGE.

Use case energy transportation infrastructure:

- Defect detection at the isolation system
- Automatic RTV application procedure

COMPUTER VISION. USE CASE COMPOSITE AM

Use case Additive Manufacturing of TP Continuous fiber Composites:

- Development of the robotic cell Inspection system

ROVIMATICA IN THE WORLD:

CONTACT

THANK YOU
