TM Factory

Invest in the future of the industry

With our polymorphic software, digitalize your production efficiently and swiftly. Explore a new generation of digital tools that adapt to your company, your IT system, and your machine park.
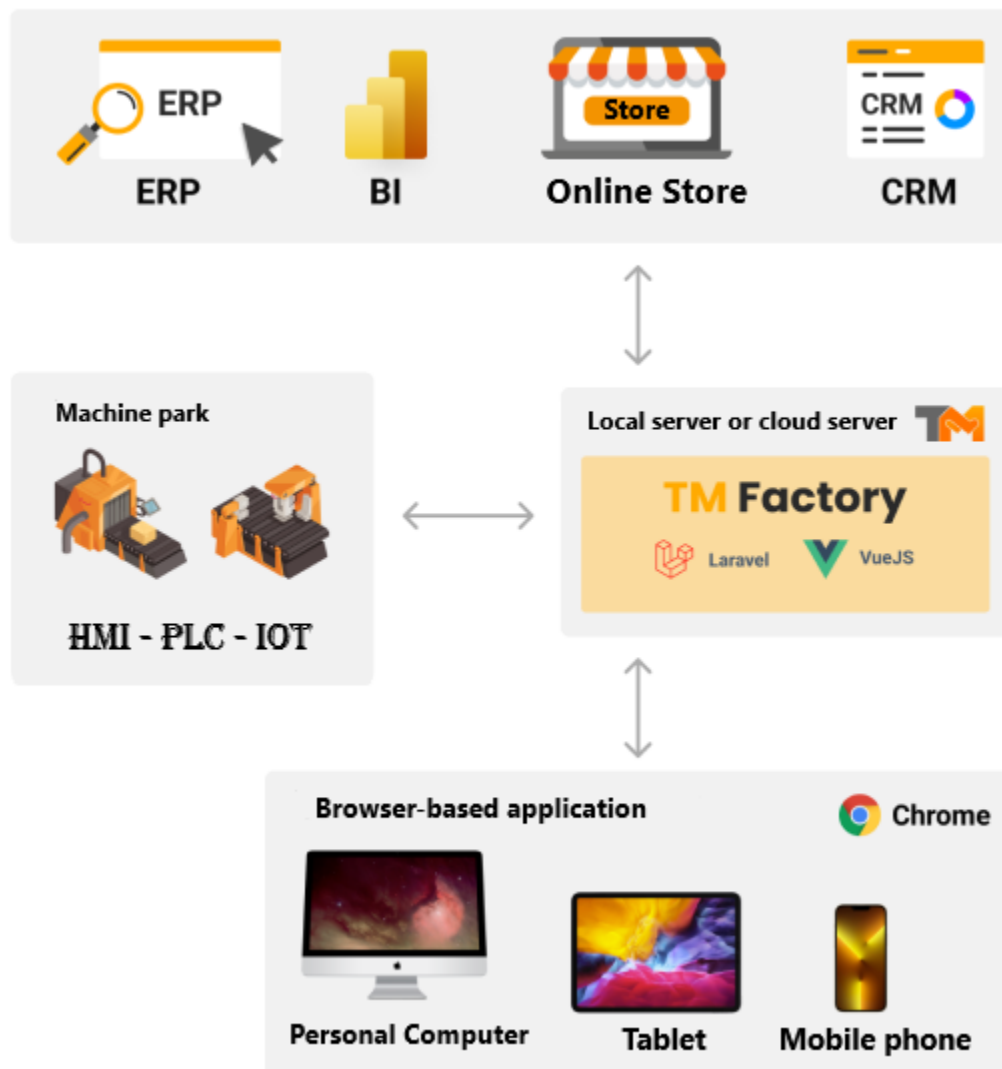

Interconnection

TM FACTORY establishes a connection between your tools and your collaborators. It centralizes software data on one side and machine data on the other.

Thanks to our Small Data approach, make relevant and targeted data available to every user.

The TALKME team interconnects the software with all types of ERPs, following the company's IT procedures.

We target relevant machine data, such as downtime and causes, and adapt to various brands and models.
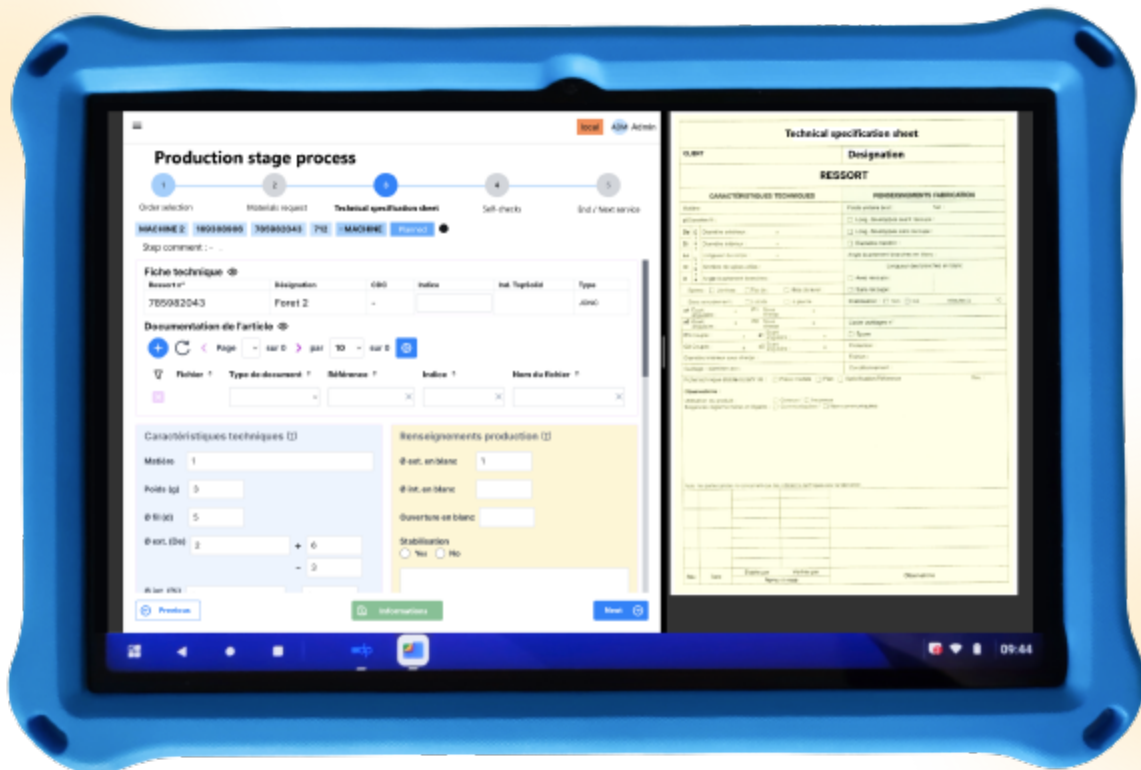

Employee assistance

TM FACTORY improves the daily experience for your operators. Each team member contributes their unique value to tasks focused on human involvement.

Technical documentation is customized for each task and is easily accessible at workstations or on mobile devices. Thanks to the user-friendly software design, data input is simplified and streamlined.

Operators can self-organize, and knowledge acquisition, onboarding of new team members, and process familiarization are accelerated through intuitive interfaces.

Management

TM FACTORY provides you with your performance and quality indicators to ensure real-time production management: OEE, OLE, % progress, scrap rates...

Customized dashboards include alerting and notification systems.

TM FACTORY ensures traceability of Manufacturing Orders and materials, facilitating customer complaint management.
