Digitalization, quality assurance, production optimization and artificial intelligence (AI) are terms that we encounter every day in manufacturing companies. But how can you combine these terms and, above all, what would be the benefit of implementing them in your own production?

MVCon - Machine Vision Consulting is your partner if you:

- want to know whether industrial image processing and AI make sense in your production processes.
- want to understand the technology in order to better assess different camera systems.
- want to automate or optimize your processes with camera systems and you don't really know how to proceed.
- need support in creating an optimal concept for quality controls with camera systems.

With more than 30 years of experience in electronics, mechatronics and industrial image processing and well over 100 completed machine vision projects, I can use my expertise to provide you with optimal advice, training and support with concepts - neutral and manufacturer independent.

What benefit do you have?
- ✔ You can save a lot of time and money due to compact and concentrated transfer of knowledge.
- ✔ You can ask the right questions to suppliers in order to achieve the best possible result
- ✔ You have a better understanding of the technology and therefore you can plan the systems more optimally in the concept phase. This saves you also time and money.

Would you like to start digitalization without your own technical staff?
Don´t hesitate to contact me for a free initial consultation. I look forward to it.

With kind regards,

Markus Piffer
